

# CHILDHOOD ADHD

## Where to go when you're looking for help

### What is ADHD like in youth?

Attention-deficit/hyperactivity disorder (ADHD) is one of the most common disorders among young people. It affects attention span and concentration, and can also affect how impulsive and active the person is.

Most young people are, at times, inattentive, distractible, impulsive or highly active. They may have ADHD if these behaviours occur more frequently and are more severe than is considered average among young people of the same age or developmental level. A diagnosis of ADHD might also result if the behaviours persist over time and affect the person's family and his or her social and school life.

Studies have shown different rates of ADHD among young people, ranging from 1 to 13 per cent. ADHD is three to four times more common in boys than girls.

### What are the signs and symptoms of ADHD?

The signs and symptoms of ADHD fall into two main groups: inattentive behaviours and hyperactive and impulsive behaviours:

- **inattention**—not paying attention to details and making what appear to be careless mistakes in schoolwork or other activities. The young person may have a hard time staying focused on activities. He or she may have difficulty being organized and may often get distracted and lose things.
- **hyperactivity**—may show up as fidgeting and squirming, not being able to sit still and talking and moving around a lot.
- **impulsivity**—having difficulty waiting for a turn, blurting out answers before someone has finished asking the question, and interrupting conversation or games.

## What does treatment involve?

Cognitive-behavioural therapy (CBT) can help build self-esteem, reduce negative thoughts and improve problem-solving skills. CBT can also help people learn self-control and improve their social skills.

Parents can learn how to better manage their children's behaviour by taking parent management skills training. Educators can design programs for young people with ADHD to encourage success and to address any co-existing learning disabilities that students might have, such as difficulty with reading.

For more information about ADHD, visit [www.camh.ca](http://www.camh.ca) and under "Health Info," search for "attention-deficit/hyperactivity disorder" in the "Conditions & Disorders" section.
